WINDOW FITTINGS, FIXTURES & SEALING SYSTEMS

Small fingers a problem?

provides an effective, attractive and low cost solution to this problem.

The fact, that children like to press their hands against lift doors has led to incidents where small fingers have been trapped in the gap between the door frame and the door.

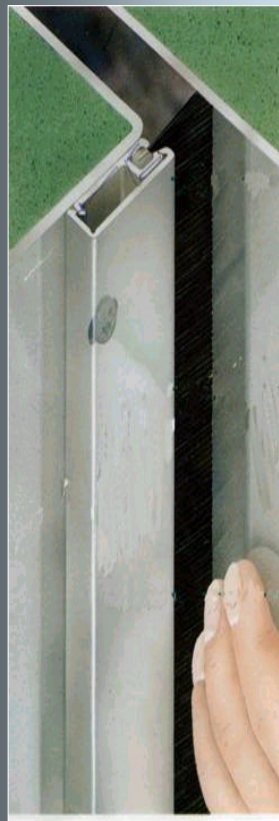

By installing Elevator Guard and reducing the gap the risk of this is significantly reduced. Elevator Guard can also help reduce wind noise in lobby areas and help reduce heating costs.

A set of Elevator Guard comes complete with a cover plate, slotted back plate, brushstrip and fixings.

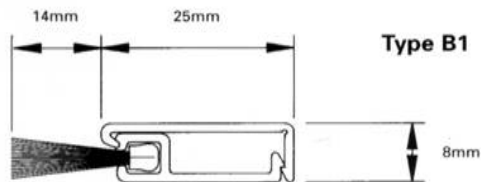

Installation is simple. Measure the opening and cut the back plate to size, position, mark, drill and affix to the frame. Position the brushstrip to the highest point on the door, leave the smallest of gaps. This is because the filament can mark the surface of the door.

Cut the cover plate to size and snap-on to the backplate.

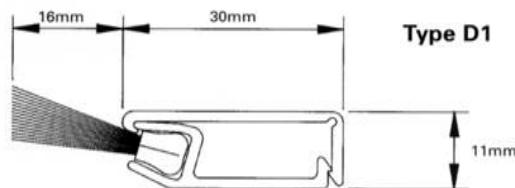

Job done

One Problem , Two Solutions

Length 2100mm

Length 2100mm

The standard finish of the cover plate is silver anodised, but we can provide other finishes.

Just ask for details!

Elevator Guard is manufactured in the United Kingdom by Kleeneze Sealtech Bristol England UK
